PROFESSIONAL SUMMARY

2026 Communication and Electronics Engineering graduate with hands-on DevOps experience across Linux infrastructure, CI/CD, Docker, Kubernetes/k3s, Terraform, AWS, GitOps, observability, and troubleshooting. Currently supporting production cloud-native workloads at Easytravel, backed by more than three years of prior IT operations experience.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (VPC, IAM, EKS), Terraform, Ansible, Linux, Infrastructure as Code

Containers & GitOps: Docker, Docker Compose, Kubernetes, k3s, Helm, Argo CD, Istio

CI/CD & Scripting: Git, GitHub Actions, Jenkins, Docker Hub, Bash, Python, deployment automation

DevSecOps & Networking: Nginx, TLS/mTLS, IAM, Kubernetes NetworkPolicies, access controls, secrets management, Linux networking, Trivy, GitLeaks, SonarQube

Observability & Operations: Prometheus, Grafana, logs, metrics, dashboards, health checks, backups, troubleshooting

PROFESSIONAL EXPERIENCE

DevOps Engineer — Apr 2026 - Present

Easytravel

- Operate 7 Ubuntu servers and a self-managed k3s cluster supporting approximately 10 C# microservices, SQL Server, Redis, and a Flutter application.
- Build and maintain GitHub Actions CI/CD pipelines with Docker and a private Docker Hub registry, including automated image tagging and deployment.
- Provision infrastructure with Terraform, monitor services with Prometheus and Grafana, and troubleshoot Linux, networking, deployment, and service-connectivity issues.

DevOps Intern — Nov 2025 - Jul 2026

Digital Egypt Pioneers Initiative (DEPI)

- Completed intensive hands-on DevOps training covering Linux, AWS, CI/CD, Docker, Kubernetes, Terraform, Ansible, Helm, GitOps, and automation.
- Built CI/CD pipelines and cloud-native capstone environments using Jenkins, GitHub Actions, AWS, Infrastructure as Code, container orchestration, and observability.

IT Specialist — Dec 2020 - Apr 2024

Water Company

- Supported 100+ users and maintained Windows/Linux systems, LAN/WAN infrastructure, Cisco routers and switches, patching, backups, and user access while contributing to approximately 99% system uptime.
- Resolved day-to-day infrastructure and connectivity incidents, building the systems, networking, and troubleshooting foundation now applied in DevOps operations.

SELECTED PROJECTS

Space Cargo Platform - Cloud-Native Microservices on AWS EKS **2026**

DevOps Engineer | *DEPI Capstone* | **GitHub**

- Architected and deployed four containerized microservices on AWS EKS with private worker nodes, using Terraform for VPC, IAM, EKS, and administration-host infrastructure.
- Built CI/CD and GitOps workflows with GitHub Actions, Docker Hub, Helm, and Argo CD using immutable commit-SHA image tags.
- Applied Istio ingress, strict mTLS, authorization policies, Kubernetes NetworkPolicies, autoscaling, health probes, and disruption controls.
- Automated platform bootstrap with Ansible and implemented Prometheus/Grafana observability for services, Kubernetes, HPA, Istio, and worker nodes.

Stack: AWS EKS, Kubernetes, Terraform, GitHub Actions, Docker Hub, Helm, Argo CD, Istio, Ansible, Prometheus, Grafana

AscultiCor - AI-Assisted Cardiac Monitoring Platform **2026**

Technical Lead & DevOps Engineer | *8-member team* | **GitHub**

- Led the architecture and delivery of an IoT and AI platform for acquiring, analyzing, and visualizing real-time ECG and heart-sound signals.
- Containerized Next.js, FastAPI, Mosquitto MQTT, Nginx, and n8n services with Docker Compose, and designed Terraform-based cloud infrastructure and deployment workflows.
- Implemented secure device onboarding, device-specific MQTT credentials, OTA firmware delivery, Supabase access controls, health checks, backups, and operational security controls.

Stack: Docker, Terraform, Nginx, Linux, GitHub Actions, MQTT, Supabase, PostgreSQL, Next.js, FastAPI, Python, n8n, ESP32

EDUCATION

Bachelor of Communication and Electronics Engineering | BNS University, Bani Suef, Egypt | Graduated 2026

LANGUAGES

Arabic - Native/Bilingual | English - Proficient
